far beyond ordinary

BEYOND WHAT I SEE

Years from now, this racquet will be lighter and stronger than you could ever picture. Fully packed with new innovations. All those innovations are bound to be discovered. They're all hidden, impatiently waiting to be uncovered.

When I get my hands on this racquet, it will be the culmination of thousands of ideas, tried and failed. It will be standing proof, that endlessly testing both expected and unexpected ideas will mold the basis for game-changing performance.

But this racquet won't uncover itself — not without a little imagination.

It's time I search beyond what I know today.

“ENGINEERED FOR YOUR GAME.”

Badminton racquets were the start of the Yonex journey into sports. With each racquet developed, our vision became clearer. We learned the fun of crafting world-class racquets alongside the most elite players and now, we strive for innovative racquets that help every athlete achieve new speeds and new heights.

We believe the best performance cannot be prepared with just any ingredient. Every gram, every millimeter can be the deal-maker or -breaker. That's why we source the highest quality advanced graphite for our chefs to personally cook up into each individual masterpiece.

ISOMETRIC™

SIGNATURE YONEX TECHNOLOGY SINCE 1980*

ISOMETRIC™ technology was invented by Yonex to maximize the vital sweet spot area and is now a world-leading feature of our racquets. The Added a space head of the racquet means that there are more strings crossing at right angles, resulting in a bigger sweet spot. Yonex continues to develop and enhance ISOMETRIC™ power, reducing still further the 'inert' space around the edge of conventional racquets, creating a far bigger sweet spot than other frames.

ISOMETRIC™ is a trademark of Yonex Co., Ltd. *Tested by Yonex

*Originally developed for tennis racquets, in 1992 Yonex released the first ISOMETRIC badminton racquet.

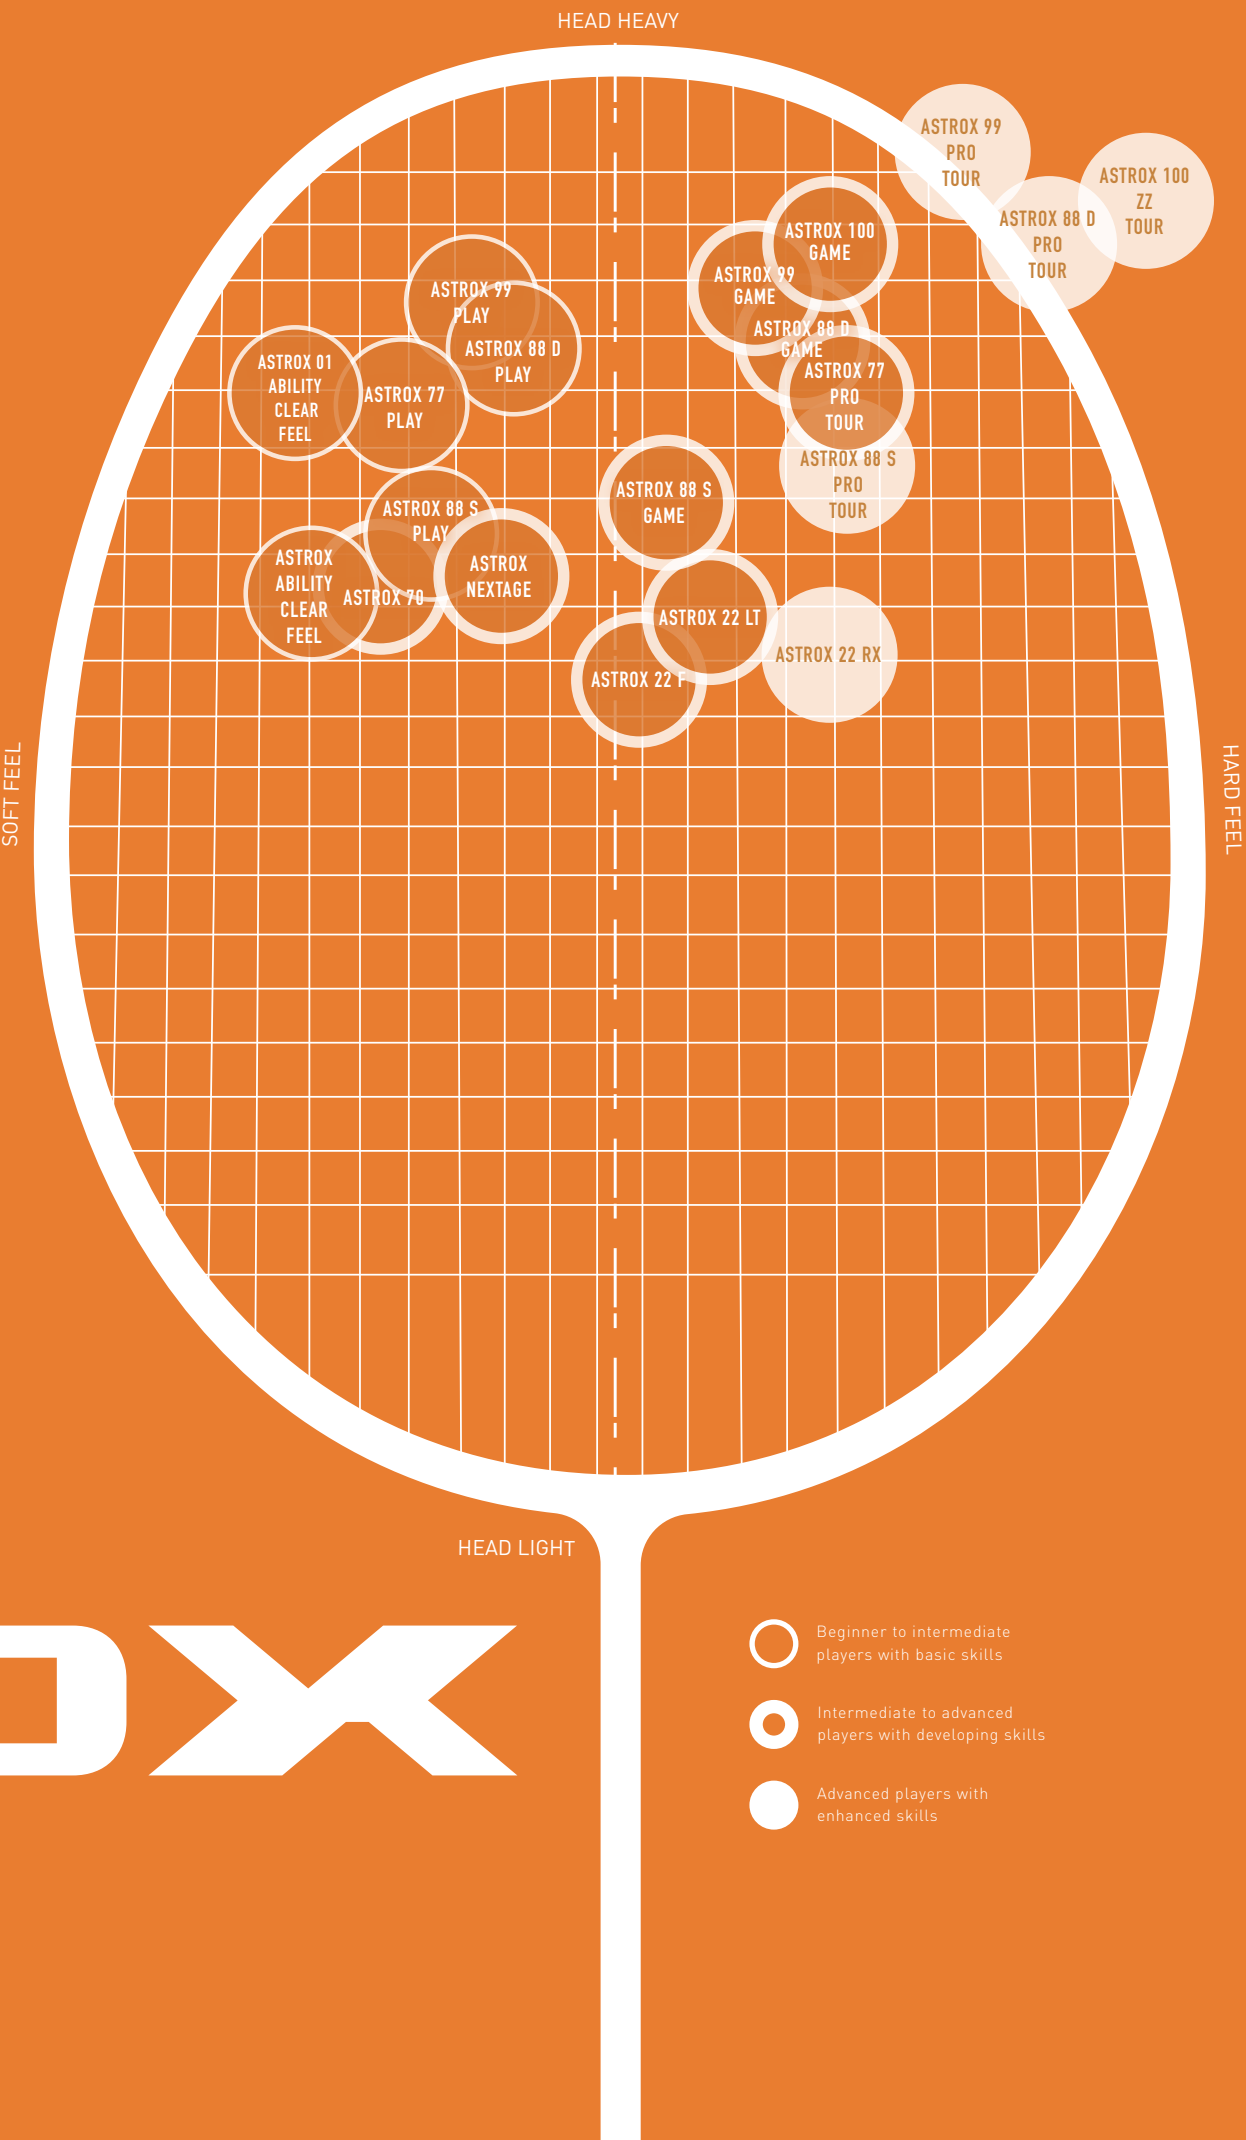

POWER

INITIATE
A RELENTLESS ATTACK

The ASTROX series is developed to meet the demands of aggressive attacking play, taking the point to your opponent with relentless steep attacks.

The Rotational Generator System perfectly distributes weight through the grip end, frame top and the T-joint for maximum control, enabling smooth transition between shots, in a rapid succession. Revolutionary graphite materials such as Namd™* are utilized to produce Namd™* and faster snapback for imposing power.

ASTROX
ASTROX

* Namd™ is a technology developed by Nitta Corporation to "uniformly disperse carbon nanotubes into carbon fiber composites."

ASTROX77

FLEX FUSE

The shock absorbing resin used in the joint creates a comfortable hitting feel.

ROTATIONAL GENERATOR SYSTEM

Weight is distributed thoroughly throughout the frame top, joint and the grip end for smooth racquet work and successive, powerful smashes.

Namd™

Namd™ situated in the shaft results in a large increase in shaft flex and snap back speed, producing explosive smashes.

ACCURACY

MASTER
OF PRECISION

The acclaimed ARCSABER series designed for control is reimagined with emphasized shuttle-pocketing for a controlled offense and one-of-a-kind feel at impact.

Taking control of the court can come in all different forms. For the ARCSABER, that comes from the extra few milliseconds of shuttle contact time allowing assertive shot-making. Combine that with the stability of the enhanced ARCSABER frame, you gain the confidence to command the court.

ENHANCED
ARCSABER FRAME

Control with confidence through this unique frame structure with varying levels of flex from top, sides, to bottom, built to increase shuttle hold while reducing instability and twisting at impact.

POCKETING BOOSTER

The frame is lined with POCKETING BOOSTER, a proprietary rubber-like material emphasizing elasticity in the frame's flex.

TORQUE-TO-FLIGHT SHAFT

The shaft is designed with optimal twist for improved control and flight.

NANOSCIENCE

NANOSCIENCE technology allows Yonex to alter the structure of materials in a racquet to enhance the **STRENGTH, FLEX and POWER**.

M40X

A next-generation highly strong, yet elastic carbon fiber developed by Toray Industries, Inc. [TORAYCA™ M40X is developed by Toray Industries, Inc.]

Namd™

A world-first, new dimension graphite material, Namd™, produces more flex with a faster snapback, unleashing dramatic power. [Namd™ is a technology developed by Nitta Co., Ltd.]

NANOCELL NEO

A resilient yet surprisingly flexible graphite material providing increased power.

NANOMESH NEO

Ensures a stronger more flexible frame, while increased shaft flex creates maximum power.

NANOMETRIC

Tightly bonded fibers enhance the racquet's strength and minimize twisting during impact. NANOMETRIC is a material which applies the NANOALLOY™ technology of Toray Industries, Inc.

NANOMETRIC DR

An enhanced graphite based on unique NANOSCIENCE technology for a firm shuttle hold creating maximum repulsion.

X-FULLERENE

Used in the resin which bonds the carbon fibers, resulting in a tenfold increase in binding force which makes it possible to create 5% higher repulsion power and 15% greater stability than conventional graphite.

MATERIAL HIGHLIGHTS

BLACK MICRO CORE

A stiff, high-density vibration-dampening material featured in the upper half of the frame, allowing players to hit with a solid feel and power.

FLEX FUSE

The shock absorbing resin used in the joint creates a comfortable hitting feel.

HYPER-MG / EX-HMG / SUPER HMG

These ultra-elastic materials produce sharper power for all shots.

LIGHT FEEL CARBON NEO

The additional rubber creates a lighter feel and increased flex for greater head speed.

POCKETING BOOSTER

A proprietary rubber-like material emphasizing elasticity in the frame's flex.

REXIL FIBER

Increases repulsion power to the shuttle while minimizing shock at impact.

SONIC METAL

Situated in the lower frame for aggressive snapback power with an attacking sound.

T-ANCHOR

Increases stiffness for quicker racquet recovery into the next shot.

TUNGSTEN

A metal with a high tensile strength.

VDM (VIBRATION DAMPENING MESH)

Vibration dampening material is a stretchy mesh rolled with the graphite to greatly reduce unwanted vibrations.

FRAME

AERO FRAME

Cuts air resistance for faster swing speeds and increased maneuverability.

AERO+BOX FRAME

A combination of faster swing speeds and a solid feel.

BOX FRAME

The extra stiff profile provides a solid stable feel on impact with the shuttle.

COMPACT FRAME

Reduced air resistance and improved feel with the shuttle.

CONTROL-ASSIST BUMPER

The CONTROL-ASSIST BUMPER attached at the top contains T-ANCHOR, micro-sized tetrapods that help lock in vertical strings for improved accuracy.

DUAL OPTIMUM SYSTEM

Two contrasting racquet profiles in one unique Dual Dynamic Design allow players to enhance both their forehand and backhand.

DUORA GROMMET DESIGN

8 linked grommets made with differing thickness on either side of the frame. The stiffer AERO side grommets pull the string harder for increased power.

DURA FRAME

Provides aluminum frames with greater strength and a solid feel.

ENHANCED ARCSABER FRAME

Control with confidence through this unique frame structure with varying levels of flex from top, sides, to bottom, built to increase shuttle hold while reducing instability and twisting at impact.

HORIZONTAL-A CONCEPT

Larger sweet spot at the top of the frame in a compact head design.

MUSCLE POWER FRAME

Smoother grommets reduce string stress for greater durability.

POWER-ASSIST BUMPER

Boosted power with a tungsten-infused weighted bumper, adding 55%* more weight than conventional grommets. The POWER-ASSIST BUMPER enhances the Rotational Generator System, quickly transferring more weight to the shuttle.

*Measured by Yonex

ROTATIONAL GENERATOR SYSTEM

By applying the counterbalance theory, weight is distributed throughout the grip end, frame top and the joint for maximum control. The transition to the next shot can be performed smoothly with a rapid succession.

SBZ (SNAPBACK ZONE)

The slimmer section of racquet frame flexes at impact for greater shuttle speeds.

SOLID FEEL CORE

Reduces vibrations traveling down the shaft for improved comfort.

SONIC FLARE SYSTEM

Carefully selected high modulus graphite are strategically placed across the bottom of the frame to provide unrivalled power and stability for maximum shuttle acceleration.

TRI-VOLTAGE SYSTEM

A combination of intelligent head weighting, frame flex and aerodynamics generates explosive force without compromising on speed or control.

VERTICAL-A CONCEPT

Vertical grommets provide greater flex in the string bed and a wider sweet spot.

WIDE DIAMETER GROMMETS

Control the shuttle-release timing with larger grommets designed for more string movement, extending the shuttle contact time.

JOINT

BUILT-IN T-JOINT

Increases strength between the frame and shaft eliminating head twist for more control.

NEW BUILT-IN T-JOINT

The lightweight T-Joint increases stability of the shuttle on the strings, maximizing power and control.

SHAFT

REXIS SHAFT

A high-performance shaft precisely designed with an original Yonex molding technique. Improves shot performance and dominates the game.

HYPER / EXTRA / ULTRA / SUPER SLIM SHAFTS

Designed to slice through the air, generating speedy power.

ULTRA PEF

Lightweight fibers that withstand immense forces while absorbing unwanted shock and vibrations.

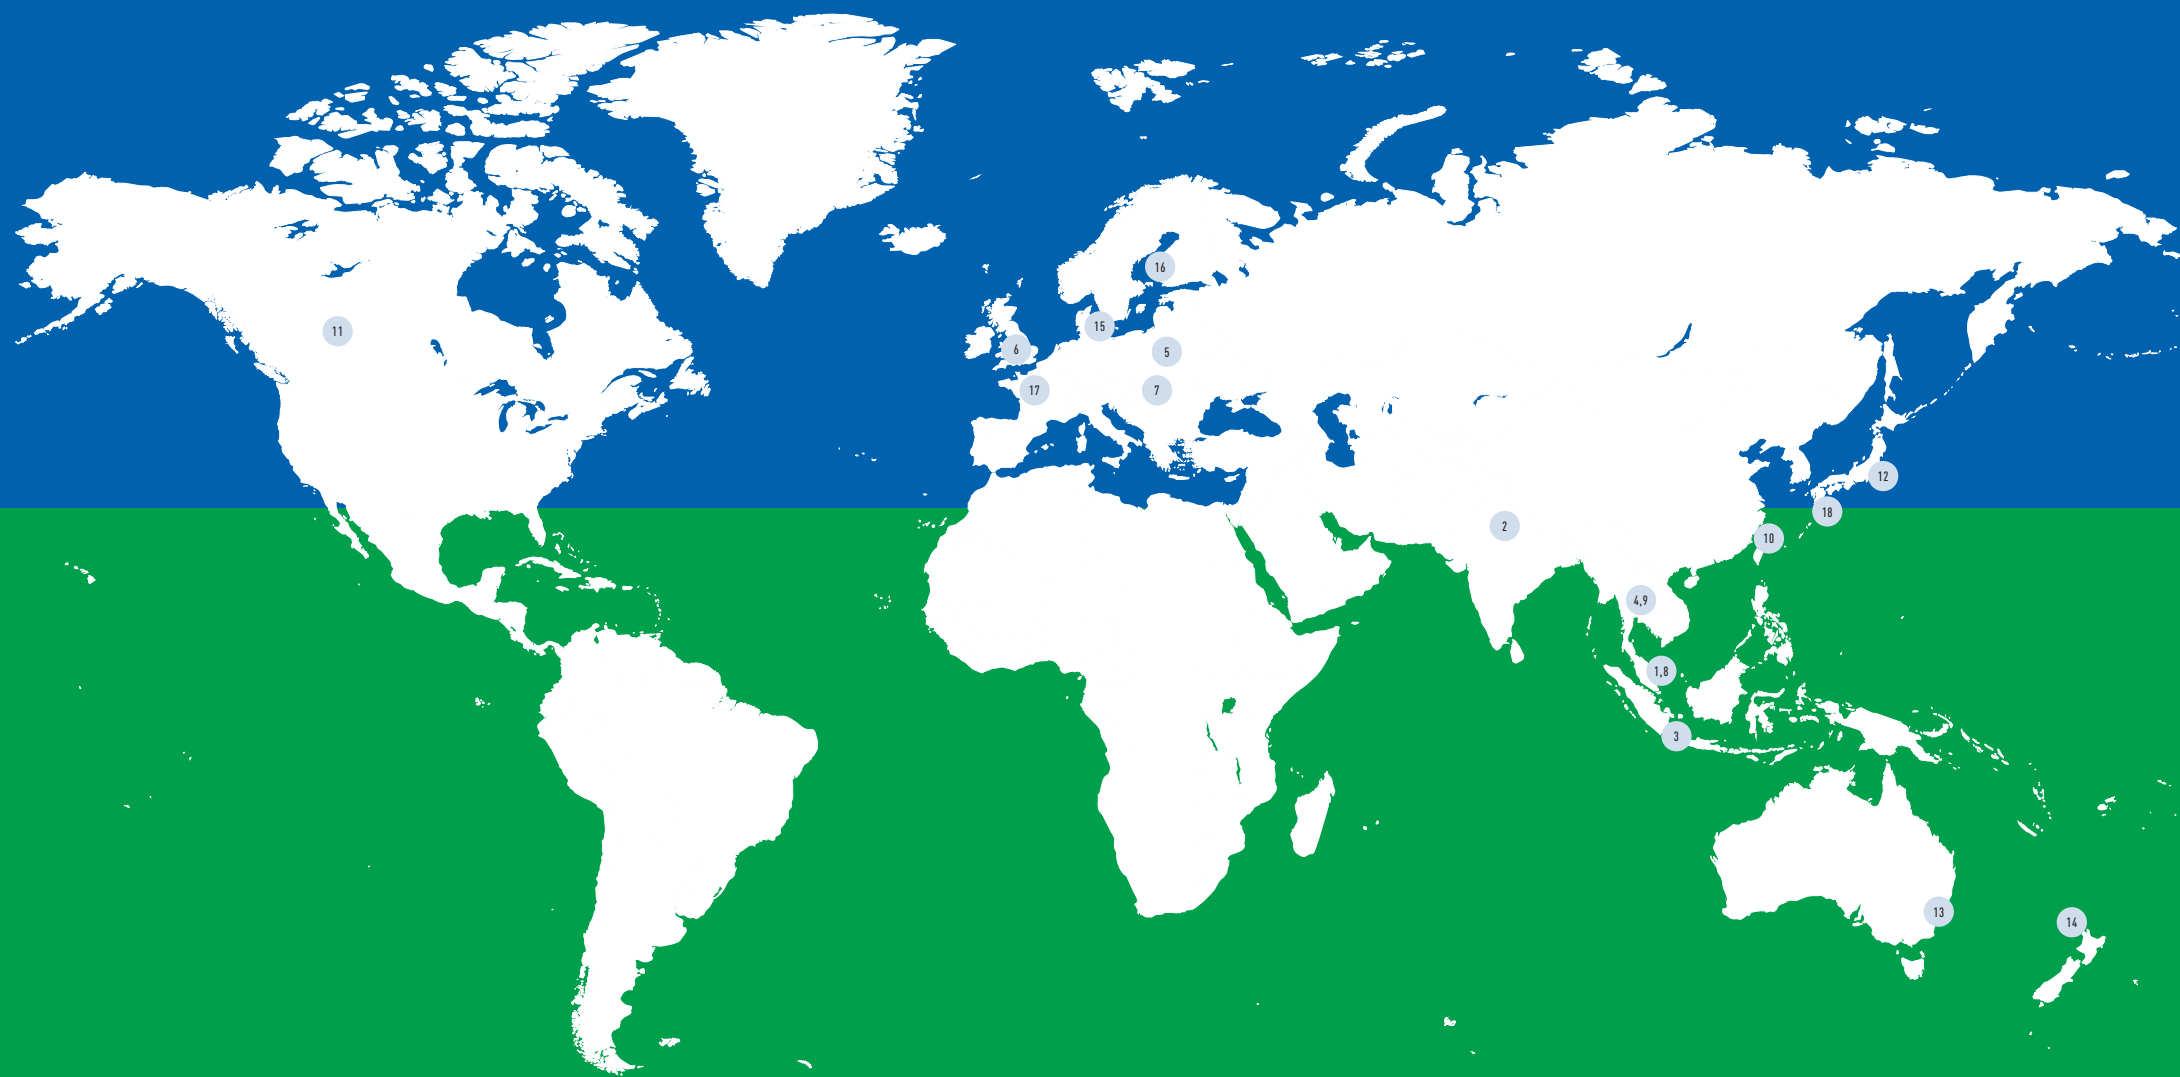

CAP

CONTROL SUPPORT CAP

Wider, flatter surface improves grip for increased racquet control.

ENERGY BOOST CAP / PLUS

Uniquely shaped cap which maximizes shaft performance. The front allows the shaft to flex, while the sides arch-shaped curve stabilizes the racquet face by preventing the shaft from twisting.

OUR RANGE OF —

STRINGS

“CRAFTING EVERY SWEET SPOT.”

Choosing the right string is as important as choosing the right racquet. That is why Yonex engineers put so much effort into designing innovative new products like the EXBOLT, a next-generation multifilament string. The EXBOLT is engineered with the proprietary FORGED FIBER, a thin yet radically durable outer, allowing the player to pierce through their opponent's defense with agile and high-velocity drives.

Innovation lies in the smallest details. Yonex never stops meticulously testing cutting-edge fibers and coatings, finding more efficient ways to craft stronger strings for every performance preference and level of play.

TECHNOLOGY

Forged Fiber
FORGED FIBER has strong molecular bonds which result in 1.5 times higher heat resistance than general nylon.

Hi-Sling Fiber
Achieves greater flight with high resilience and provides a soft hitting feel.

Compact Filled Structure
Reduce power loss and improve strength by filling the gaps fully with resin.

Vectran™
Stretch resistant Super Fiber: more than twice as strong as nylon.

Braided Structure
Braided threads around the main core thread create a robust string structure, allowing it to swiftly return back to its original position after impact for more power and repulsion on the shuttlecock.

COATING

Elasticity Outer
The Elasticity Outer is a coating with enhanced flexibility achieved by applying NANOALLOY technology to nylon. The result is a combination of quick repulsion, durability, and control.

Polyurethane Coating
This tacky coating provides increased hold on the shuttlecock providing more bite on shuttlecock at the moment of impact for improved control.

Special Nylon Coating
Coating combined with highly flexible material at high speed deformation. Bites the shuttle at impact, showing great control and power.

Compound Titanium Hydride
Compound titanium hydride coating provides not only a sharp feel at impact but increased durability.

Cup-Stack Carbon Nanotube
Advanced construction minimizes notching of the string at the intersections, for greater durability and high repulsion power.

Precisely scan the total weight and balance of racquets by placing the racquet on the machine with a touch of a button.

QUICK SCAN: COMPUTER UNIT

The computer unit will provide the total weight, balance, swing weight, and performance swing weight. Performance swing weight is a Yonex-exclusive measurement - more accurate than normal swing weight - and is calculated by using the values of the total weight, racquet balance, and swing weight.

ACCURATE: COVER, BAR, RING

The acrylic cover protects the machine's three main sensors while not in use. A calibration bar and calibration ring is provided to ensure the machine gives accurate swing weight measurements.

	POWER CUSHION + POWER CUSHION									

3D Power Graphite Sheet
Provides stability under the center of the foot and reduces shoe twist.

Power Graphite Drive
A graphite sheet is inserted along the sole for increased stability and to propel you forward to the next shot.

Power Graphite Lite
Improved stability and reduced twist on landing.

Power Graphite Sheet
Inserted in the midsole, the lightweight graphite sheet provides improved stability.

UPPER:

Durable Skin
Improves shape retention, durability and heat-resistance.

Durable Skin Light
A seamless construction offers natural comfort with an improved fit, eliminating discomfort from material friction.

Double Raschel Mesh
Highly breathable mesh for maximum ventilation.

Lateral Shell
Prevents foot movement at the edge of the sole for reduced power loss, allowing for fluid and aggressive footwork.

Ergoshape
The center of gravity is shifted to the large toe – for a comfortable fit and more speed.

Toe Assist Shape
Reduces pressure on the big toe while improving support at the mid-foot and heel for increased stability. Power loss is reduced for swift footwork.

Flexion Upper
Asymmetrical design with a curved eyelet creates a natural snug fit around the inner arch. Stress gets absorbed through the toes and instep for a more comfortable fit.

Inner Bootie
A flexible material from the metatarsal to the heel that produces a more gentle fit.

SOLE:

Hexagrip
Lightweight sole material that provides greater grip for agile stable footwork.

POWER CUSHION+
By improving shock absorption, our POWER CUSHION+ technology is designed for faster footwork that transforms impact into energy.

POWER CUSHION
A lightweight, impact-absorbing material developed independently by Yonex which quickly returns to its original shape after receiving a shock load, converting the shock energy into power for fast and light footwork.

Round Sole
For quick and smooth footwork ensuring maximum energy transfer into the next shot.

Radial Blade Sole
Designed for confidence in directional change. A proprietary sole pattern increasing traction in vertical, horizontal and diagonal movements.

Semi One-Piece Sole
Toe and heel rubber soles combined into a singular piece for improved stability, and for more traction through additional surface area.

MIDSOLE:

ToughBrid Light
Provides cushioning, shape retention and high elasticity whilst reducing shoe weight.

Feather Bounce Foam
A lightweight cushioning material designed to provide an added bounce with each step.

msLITE X
The lightest midsole material in Yonex history, 30% lighter* than general EVA.

*Tested by Yonex

INSOLE:

Synchro-Fit Insole
Reduces the gap between the foot and shoe with extra support around the heel, for maximum grip, comfort and performance.
